### ABOUT THE TOPIC

Where Birds Eat Horses (The Language of Evolution). How words can deceive This talk focuses on the use of language, as evolutionists attempt to teach their theory. The use of key words, such as 'probably' and 'may be' is examined. Also the use of rhetorical questions and the imaginative use of narrative are investigated. All of this dissembling is compared to the simple truth of scripture.

### ABOUT THE SPEAKER

Paul was born in Ashton-under-Lyne, near Manchester in the North of England, in 1961. Trained as a musician, He became interested in the sciences in high school as well as becoming saved at the age of 15 in 1977. After about a year, Paul got a Saturday job in a Christian bookshop, where he came upon literature from a creationist organization in the UK. He was astonished that there were people around – even those with scientific qualifications – that did not believe the theory of evolution. The bookstore manager, who held a degree in science, explained these things to Paul. From that point on, Paul has written & spoken on the subjects of creation, evolution, Genesis and apologetics.

After obtaining a degree in Chemistry, and a teaching certificate from the University of Nottingham, Paul became a high school science teacher. He worked successfully in this career for 18 years, rising through the ranks, eventually to become a Head of Science. Outside of work, Paul was involved in his church, preaching, teaching and leading worship, as well as writing worship songs. In 2000, IPaul left teaching to set up an ICT training business, training people mostly in Microsoft Office applications, and web development applications. In 2005, I was invited to join Answers in Genesis, and I worked at their UK office for 6 years, moving to the United States in 2011 to work for Creation Today, in Pensacola, Florida. Paul & his wife are now the Directors of the Mount St. Helen's Creation Information Center, at Silverlake, Washington – on the main tourist road leading to the volcano, Mount St. Helens. From this base, he continues to travel around the United States, speaking on creation, Genesis and apologetics.

Paul & his wife Geraldene have five children.
